

What's living under your gums?

Still think brushing and flossing is good enough when it comes to getting your mouth clean? Think again. The real culprit lives under your gums and it causes much more than bad breath. Harmful bacteria is at

work in your mouth, spreading infection to your body through your gum line. These pathogens lead to a wide range of life-threatening illnesses like cardiovascular disease, many types of cancer and diabetes.

The four pathogens in your mouth that are attacking your body:

Aggregatibacter Actinomycetemcomitans

- Increases risk for cardiovascular disease
- Typical cause of periodontitis
- May also be related to systemic infections and arterial plaques

Porphyromonas Gingivalis

- Inflames periodontal tissue
- Destroys the periodontal ligament and alveolar bone
- Makes up part of biofilm that is dental plaque
- Causes painful inflammation
- Leads to tooth loss

Prevotella Intermedia Plaque

- Forms abscesses that leave the body open to other infections, such as atherosclerotic vascular disease
- Main cause of many periodontal diseases
- Resistant to antibiotics

Fusobacterium Nucleatum

- Associated with periodontitis and viruses
- Causes invasive infections of the head and neck, chest, lung, liver and abdomen

Dental Air Force is a medical-grade dental cleaning system that is clinically proven to reduce these four killers in your mouth. Using a jet stream of fresh cleaner, it tackles the root cause of infection in your mouth. After just three months of use, you'll see a difference in your LifeScore™ using Oral DNA testing, meaning a reduction in these four pathogens, less gum inflammation and a potential drop in your HbA1c (diabetic marker) and CRP level (whole-body inflammatory marker).

Time to fight back against the bacteria in your mouth. Don't wait to make a change. It could save your life.
